# md-to-pdf

To be able to convert one or more Markdown (`.md`) files to pdf, save [md-to-pdf](#) in `"$HOME"/.local/share/nautilus/scripts/md-to-pdf` and make it executable.

Screenshot of the context menu in Nautilus (GNOME files):

As an example, one can have a look at this README file converted to pdf: [README.md.pdf](#)

The conversion process

At first the Markdown is converted to HTML with `cmark-gfm`. Then `chromium` is used to print the HTML to pdf.

Alternatives conversion methods

see [alternatives.sh](#)
